

High Wear Resistance & Less wear to opposing teeth

Compressive Strength (MPa)

Posterior restorations are required strong property and wear resistant. PALFIQUE BULK FLOW is formulated to let patients bite with confidence, offering the highest compressive strength for stronger posterior restorations.

Product Packages Available

PALFIQUE BULK FLOW Syringe Refills

Contents: 1 syringe (3.0g)
Available in 5 shades: A1, A2, A3, B1, U

Accessory

TOKUYAMA Dispensing Tip

Contents: Dispensing Tip x 50

Manufactured by

Tokuyama Dental Corporation

38-9, Taitou 1-chome, Taitou-ku, Tokyo, Japan

Simplified and Advanced Esthetic Bulk Composite.

- Simple
- High Esthetics
- Reliable

Key Technology

Spherical and Round shape filler

- Supra-Nano Spherical filler**
 - Good polishability
 - Superior long-lasting gloss
- Round composite filler**
 - Stress relief
 - Prepolymerized by Supra-Nano Spherical filler and monomer

The spherical fillers of the Supra-Nano particles and the round shape of the composite fillers used in PALFIQUE BULK FLOW provide an uniform diffusion of light, allowing for a more forgiving shade match and superb blend to surrounding teeth. In addition, the spherical and round fillers provide low composite wear over time and safe for opposing dentition while causing less wear on opposing teeth.

RAP Technology

The catalyst technology adopted for PALFIQUE Bulk FLOW is the **Radical Amplified Photo polymerization initiator (RAP technology)**. As a major feature, the initiator balances the high polymerization activity needed to cure the resin with short exposure times (1/3 of that required by conventional products) and stability in ambient lighting.

Simple

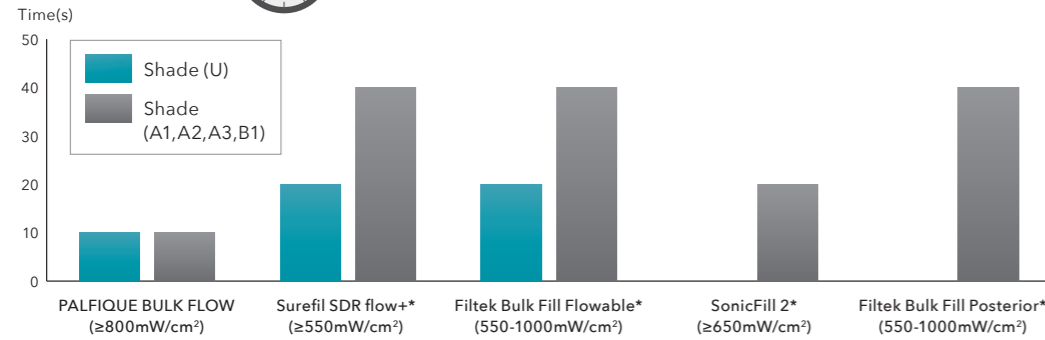

PALFIQUE BULK FLOW is different from the traditional 2mm incremental technique and commercial bulk fill flowable composites requiring a universal cap. With PALFIQUE BULK FLOW, ONLY one layer up to 4mm is required to complete a restoration. A quick curing time and easy polishing also make the procedure shorter and simpler without sacrificing esthetics.

Simple Filling

- No incremental placement
- No capping layer required
- Single fill up to 4mm

Quick Curing 10s

PALFIQUE BULK FLOW offers the clinician a reduced curing time without decreasing the working time by utilizing Tokuyama's innovative initiator system "Radical Amplified Photopolymerization (RAP) Technology".

Easy Polishing 10s

The glossiness of PALFIQUE BULK FLOW exceeds 80% in 10 seconds.

Glossiness measured by polishing in 60 seconds with Sof-lex super fine.

High Esthetics

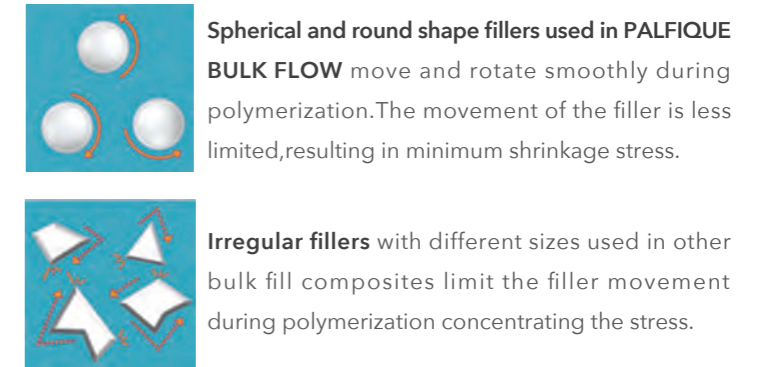

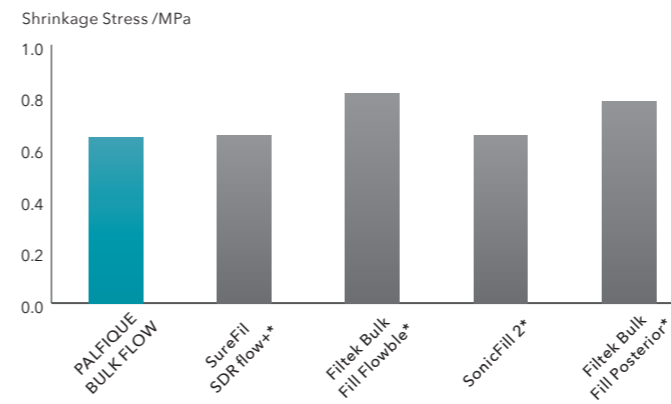

PALFIQUE BULK FLOW shows the highest translucency, which helps light reach the bottom of the restoration and ensure proper curing. PALFIQUE BULK FLOW becomes more opaque than other bulk fill composites when cured, helping the restoration look more natural.

Translucency Level

Reliable 1

Low Shrinkage Stress

Good Cavity Adaptation
